TEACHER'S MANUAL FOR GRADE 8

IMPLEMENTATION OF COMPETENCY-BASED EDUCATION

TERM 1

Introduction

In an increasingly digital world, Information and Communication Technology (ICT) has become a cornerstone of modern education, equipping learners with the skills necessary to thrive in a knowledge-based society. The Junior Secondary ICT syllabus is designed to build upon foundational competencies acquired at the primary level, deepening understanding of digital tools, systems, and responsible technology use.

Aligned with the principles of Competency-Based Education, the syllabus emphasises learner-centred approaches, practical engagements, and the development of real-world problem-solving skills. It aims to foster digital literacy, critical thinking, and creativity through structured learning experiences that integrate theory with hands-on application.

ICT in the Junior Secondary Phase is timetabled to ensure consistent exposure and progression, with focus on:

- enhancing learners' ability to use digital tools for communication and content creation
- promoting responsible and ethical use of technology, including cybersecurity awareness
- developing computational thinking and basic programming skills
- encouraging exploration of ICTs' role in society, economy, and sustainable development.

This syllabus is intended for schools that meet the minimum equipment standards and employ qualified ICT educators, as outlined in the Curriculum Framework. It supports the broader educational goal of preparing learners for further studies, employment, and active citizenship in a digitally connected world. ICT is to be timetabled for 2.0 hours per week (3 periods of 40 minutes per week) in both Grades 8 and 9.

Purpose of the Manual

A teacher's manual serves as comprehensive, pedagogical guide that assist educators in planning, implementing, and assessing learning based on the syllabus. It provides structured lesson plan, teaching strategies, learning outcomes and assessment tools, helping teachers to save time, adapt to classroom needs and enhance learners' outcomes. Its purpose is to:

- act as a practical bridge between the Competency-Bases Education (CBE) theory and daily classroom practice.
- transform the teacher's role from a lecturer into an active facilitator of learning.
- de-mystify CBE by breaking down complex pedagogical language into simple, actionable steps.

- ensure instructional consistency across all regions of Eswatini to maintain national standards.
- serve as a stopgap resource providing high-quality guidelines.
- shift from memorising facts to mastering transferable skills.
- provide standardised rubrics to ensure that "mastery" is graded fairly and transparently.
- empower teachers to handle diverse learning needs through differentiated instruction strategies.

Content Overview for Term 1

Strand: Digital Systems and Operations
Sub-strand: Digital systems and devices
Competence: Describe the components and functions of a basic computer system.
Sub-strand: Operating systems and networking
Competence: Perform basic operations within an operating system.
Sub-strand: Health, safety, and security
Competence: Apply fundamental health and safety practices when using ICT.
Strand: Data handling and productivity software tools
Sub-strand: Data management
Competence: Organise digital files and folders effectively.
Sub-strand: Multimedia creation
Competence: Use a simple graphic tool to create or edit an image.
Sub-strand: Digital text and publishing
Competence: Produce and format a basic text document.
Sub-strand: Digital media and presentations
Competence: Create a simple digital presentation to convey information.
Sub-strand: Data processing and visualisation
Competence: Use a spreadsheet to enter data and perform simple calculations.

Competency Delivery Guide

This section serves as a practical resource to support teachers in delivering competencies through learner-centred approaches. It provides ready-to-use activity ideas, assessment tools, and facilitation tips that make competency-based teaching manageable, engaging, and relevant to learners' experiences. The strategies encourage deep understanding, skill development, and positive attitudes and values across all topics. Each activity and assessment option is drawn directly from the syllabus and organised by strand, sub-strand, and specific competencies, ensuring clear alignment between curriculum expectations and classroom practice.

Each activity and assessment option is drawn directly from the syllabus and organised according to the strand, sub-strand, and specific competencies, ensuring clear alignment between curriculum expectations and classroom practice

Strand: Digital Systems and Operations				
Sub-strand	Competence	Materials Needed	Tips for Effective Delivery	Assessment Strategies
Digital Systems and Devices	Describe the components and functions of a basic computer system.	• Desktop or laptop computers • System unit (opened if possible) • Monitor • Keyboard • Mouse • Charts/posters of computer components • IPO model handouts • Handouts with definitions of hardware and software	Use hands-on demonstrations and allow learners to identify components physically. Apply the Input–Process–Output (IPO) model through role-play to simplify understanding.	Knowledge: Oral questioning and short written matching of components to functions. Skills: Observation checklist during hands-on identification and use of hardware. Attitudes & Values: Observation of careful handling of equipment and willingness to explore how parts work together.
	Perform basic operations within an operating system.	• Computers with a GUI (Windows/Linux) • Projector for demonstrations	Demonstrate basic navigation first, then allow guided exploration. Use short challenges (e.g. opening apps, changing settings) to build confidence.	Knowledge: Short quiz on OS functions and interface elements. Skills: Practical task checklist (open applications, navigate folders, change basic settings).

Health, Safety, and Security

	• Screenshots of operating system interfaces, • Mouse • Keyboard		Attitudes & Values: Observation of confidence, patience, and organised digital behaviour during tasks.
Apply fundamental health and safety practices when using ICT.	• Adjustable chairs and desks • Computers • Ergonomics and safety posters • lab safety checklist	Model correct posture and safe practices at all times. Use posture audits and hazard-spotting activities to reinforce responsible ICT use.	Knowledge: Questioning on health risks and safety rules. Skills: Practical assessment of correct workstation setup and safe lab behaviour. Attitudes & Values: Continuous observation of responsible behaviour and concern for personal and shared safety.

Strand: Data Handling and Productivity Software Tools

Sub-strand	Competence	Materials Needed	Tips for Effective Delivery	Assessment Strategies
Data Management	Organise digital files and folders effectively.	- Computers - Flash drives - Sample of unorganised folders - Whiteboard	Use real-life analogies such as filing cabinets or libraries. Begin with paper-based planning before digital organisation.	Knowledge: Short written task explaining files, folders, and hierarchy. Skills: Practical task organising a given set of files and folders. Attitudes & Values: Observation of neatness, organisation, and respect for digital order.
Multimedia Creation	Use a simple graphic tool to create or edit an image.	- Graphics software (Paint/Tux Paint) - Sample images, reference images (e.g., Eswatini flag) - Camera (optional)	Encourage exploration through guided discovery. Integrate cultural content to improve engagement and creativity.	Knowledge: Oral questioning on tool functions (crop, resize, draw). Skills: Portfolio assessment of created or edited images using a rubric. Attitudes & Values: Observation of creativity, perseverance, and pride in completed work.
Digital Text and Publishing	Produce and format a basic text document.	- Word processing software (MS Word/Google Docs) - sample letters or short texts - Typing guides/typing tutors - Short stories	Link formatting tools to a communication purpose. Demonstrate how layout improves readability and presentation.	Knowledge: Identification of word processor features and formatting tools. Skills: Rubric-based assessment of a typed and formatted document. Attitudes & Values: Observation of care, attention to detail, and pride in presentation.

Digital Media and Presentations	Create a simple digital presentation to convey information.	• Presentation software (PowerPoint/Google Slides) • Projector • Sample slide decks	Emphasise clarity and simplicity ("less is more"). Encourage peer review to improve presentation quality.	Knowledge: Questioning on slide layouts, themes, and design principles. Skills: Rubric-based assessment of a short presentation (text, images, transitions). Attitudes & Values: Observation of confidence, collaboration, and respect for audience feedback.
Data Processing and Visualisation	Use a spreadsheet to enter data and perform simple calculations.	• Spreadsheet software (Excel/Sheets) • Sample datasets, • Projector	Use practical, real-life data such as budgets. Demonstrate how formulas update automatically to strengthen understanding.	Knowledge: Short written or oral questions on cells, rows, columns, and formulas. Skills: Practical task using SUM or AVERAGE correctly in a spreadsheet. Attitudes & Values: Observation of accuracy, patience, and responsibility in handling data.

SCHEME OF WORK

Scheme of Work: Grade 8 ICT (Strands 1 & 2)

Year: 2026 - **Term:** 1

Cycle Structure: 2 Meetings (1x40 min single, 1x80 min double)

Target Week	Strand	Sub-Strand	Competences	Methods	Resources	Date of Completion
Week 1 (Feb 2-6)	1. Digital Systems & Operations	Digital Systems & Devices	Describe components and functions of a basic computer system.	Brainstorming, Hardware Scavenger Hunt, Roleplay (IPO model).	System units (opened), peripherals, posters, IPO handouts.	Feb 6, 2026
Week 2 (Feb 9-13)	1. Digital Systems & Operations	Digital Systems & Devices	Distinguish between system and application software.	Group categorisation, visual demonstrations of different OS and Apps.	Desktop/Laptop computers, software screenshots, sorting cards.	Feb 13, 2026
Week 3 (Feb 16-20)	1. Digital Systems & Operations	Operating Systems & Networking	Perform basic operations within an operating system (GUI navigation).	"Settings" Challenge, GUI vs CLI visual comparison.	Computers with a GUI (Windows/Linux), Projector.	Feb 20, 2026
Week 4 (Feb 23-27)	1. Digital Systems & Operations	Health, Safety and Security	Apply fundamental health and safety practices when using ICT.	Posture audits, lab safety drills, "Spot the Hazard" game.	Adjustable chairs, posters on ergonomics, lab safety checklist.	Feb 27, 2026
Week 5 (Mar 2-6)	2. Data Handling & Productivity Tools	Data Management	Organise digital files and folders effectively.	Hierarchy mapping (Family tree model), "The Great Clean-up" mission.	Flash drives, computers with pre-made unorganized file sets.	Mar 6, 2026

Target Week	Strand	Sub-Strand	Competences	Methods	Resources	Date of Completion
Week 6 (Mar 9-13)	2. Data Handling & Productivity Tools	Multimedia Creation	Use a simple graphic tool to create or edit an image.	National Pride Project (Drawing Eswatini flag), Tool discovery.	Graphic software (Paint/Tux Paint), Eswatini flag reference images.	Mar 13, 2026
Week 7 (Mar 16-20)	2. Data Handling & Productivity Tools	Digital Text and Publishing	Produce and format a basic text document.	Interface scavenger hunt, "Creative Writer" story formatting.	Word processing software (MS Word), sample letters.	Mar 20, 2026
Week 8 (Mar 23-27)	2. Data Handling & Productivity Tools	Digital Media & Presentations	Create a simple digital presentation to convey information.	"My Culture" presentation project, design critiques.	PowerPoint/Google Slides, projector, cultural tradition research data.	Mar 27, 2026
Week 9 (Mar 30 - Apr 3)	2. Data Handling & Productivity Tools	Data Processing & Visualisation	Use a spreadsheet to enter data and perform simple calculations.	"Cell Address Bingo", Tuck shop budget planning using SUM/AVG.	Spreadsheet software (Excel), sample inventory data.	Apr 3, 2026
Week 10 (Apr 6-10)	1 & 2	Review & Summative Assessment	Evaluate all competencies across Strands 1 and 2.	Practical exam, portfolio review, and remedial feedback sessions.	All computer lab resources, assessment rubrics, and learner portfolios.	Apr 10, 2026

Implementation Guide for Teachers:

- **Session 1 (Single Period - 40 mins):** Focus on **Knowledge** and **Theory**. Use this time for the definitions, "unplugged" activities, and explaining the logic behind the task.
- **Session 2 (Double Period - 80 mins):** Focus on **Skills** and **Attitudes**. Use the first 40 mins for hands-on practical exercise and the remaining 40 mins for project work, practical tests, or peer evaluations using the rubrics.

LESSON PLAN

Lesson Structure

Subject: ICT

Date: 23.02.202

Duration: 40 Minutes

Lesson topic: Components and Functions of a Basic Computer System

Strand: Digital Systems and Operations

Sub-strand: Digital Systems and Devices

Core skills

Core skills	Developed when learners ...
Literacy & Communication	explain computer components orally and use correct ICT terminology
Thinking Skills	classify items into hardware and software
Learning Skills	observe, listen, and take short notes during demonstrations
ICT Skills	physically identify and use basic computer components
Social skills	Work in their small groups during the lesson
Personal Skills	demonstrate care, responsibility, and teamwork when handling equipment

Competency: Describe the components and functions of a basic computer system.

Indicators of success

This is shown when the learner can:

Knowledge	Skills	Attitudes and Values
- define and give examples of a computer, hardware, and software - list names and functions of basic hardware (system unit, monitor, keyboard, mouse). - distinguish between system software and application software. - list examples of system software and application software	- identify different types of hardware. - use basic hardware to perform computing tasks.	- be inquisitive and show a willingness to explore how different parts of a computer work together - carefully handle equipment to ensure its longevity and a sense of responsibility for shared school resources.

Resources

- Desktop or laptop computer
- Monitor, keyboard, mouse
- Charts/posters showing computer components/parts
- Chalkboard/whiteboard and markers

Teacher preparation

- Verify that all computer hardware is functional and safe for learner use.
- Set up an ergonomic workstation to model safe ICT habits.
- Prepare a visual aid or physical demonstration of the **Input-Process-Output (IPO)** model

Background information

Learners build upon foundational competencies acquired at the primary level. They should recognise a computer as a tool for processing data and have basic experience interacting with a screen and input devices.

Lesson development

i. Introduction (5 Mins)

Connect with Prior Knowledge: Ask learners to name everyday tasks they perform using digital devices (e.g., social media, research).

Attitudes/Values: Trigger their **curiosity** by showing the "System Unit" and asking what they think happens inside when they press a key.

ii. Teacher and learner activities

Steps	Time (mins)	Method	Teacher's Activities	Learner's Activities	Assessment Activities
1 Presentation	10	Discussion & Demonstration	Define Hardware and Software with physical examples. Explain the IPO	Observe and identify hardware vs. software examples	Oral Q&A: Classify examples as hardware or software.
2 Hands-on Activity	15	Guided Exploration	Supervise learners as they use the mouse/keyboard to perform a task	Identify hardware components and use them to perform a task.	Observation: Verify careful handling of equipment

3 Collaborative Task	5	Small Group Work	Distribute charts. Ask groups to match hardware names to their functions	In groups, match functions (e.g., "displays data") to hardware	Peer Check: Groups swap charts to verify accuracy.
-------------------------	---	------------------	--	--	--

iii. Summary

Hardware is physical; **Software** provides instructions.

The **System Unit** houses the CPU, which acts as the computer's brain.

All computer operations follow the **IPO** (Input-Process-Output) model

iv. Conclusion and reflection

Reflection: How does understanding hardware help us take better care of school computers?.

Implications: Responsible use ensures shared resources last for future learners.

Lessons Learnt: Every part of the system is essential for the computer to function correctly.

Exercise

Name: _____ Grade: 8 _____ Date: _____

Part A: Identification & Classification (Knowledge & Skills)

1. Label the Diagram: Look at the computer system below. Write the correct name for each numbered hardware component.

- 1: _____
- 2: _____
- 3: _____
- 4: _____

Item	Hardware	Software
Mouse		
Microsoft Word		
System Unit		
Windows 11		
Monitor		

Part B: Functions and Logic (Knowledge & Thinking Skills)

3. Match the Function: Draw a line to match the Hardware Component to its correct job.

- **Keyboard** • • Displays the results/information (Output).
- **CPU (inside System Unit)** • • Used to type instructions into the computer (Input).
- **Monitor** • • The "Brain" that processes all information.

4. Short Answer: What is the main difference between **System Software** (like Windows) and **Application Software** (like a game or WhatsApp)?

Part C: Scenario & Values (Attitude & Values)

5. Problem Solving: Sipho is angry because his computer is slow, so he starts hitting the keyboard and pulling the cables.

- **a)** Is Sipho showing the correct attitude toward school resources? _____
- **b)** What should Sipho do instead to show he is a responsible learner? _____

Solutions / Marking Guide to Exercise

Part A

1. **Labelling:** 1. Monitor, 2. System Unit, 3. Keyboard, 4. Mouse.
2. **Categorization:**
 - **Hardware:** Mouse, System Unit, Monitor.
 - **Software:** Microsoft Word, Windows 11.

Part B

3. **Matching:**
 - Keyboard → Used to type instructions.
 - CPU → The "Brain" that processes information.
 - Monitor → Displays the results.
4. **Difference:** System Software runs the computer hardware (the foundation), while Application Software is used by the person to perform specific tasks (like drawing or writing).

Part C

5. **Scenario:**
 - a) No.
 - b) He should handle the equipment carefully, stay calm, and ask the teacher for help to troubleshoot the problem (showing a willingness to explore/solve issues correctly).

Assessment Guidelines

Types of Assessments

Assessment is designed to be a continuous, holistic process that combines various assessment methods to provide a thorough evaluation of mastery, measuring learners' knowledge, practical application, skills, and self-reflection.

Assessment for Learning (Formative assessment)

Assessment for learning primarily serves as a learning tool, providing continuous feedback to learners and teachers. It emphasizes core skills such as critical thinking, problem-solving, communication, collaboration, and creativity, and is vital for identifying misconceptions and adjusting instruction.

Formative assessment provides timely feedback on learner progress, enabling immediate intervention. It highlights the teaching and learning process and helps speed up educational achievement. This type of assessment can be delivered through formal and informal methods and can take place multiple times within a lesson, using various assessment tools and instruments.

All performance-based tasks are marked using rubrics that clearly define the criteria for success at different proficiency levels. This ensures transparent and objective feedback on skill mastery.

Assessment of Learning (Summative assessment)

The purpose of summative assessment is to make a final judgement on a learner's overall achievement at the end of a competency, unit, term, or grade level. These generally include traditional examinations or comprehensive tests that cover the scope and application of the knowledge base. Summative scores indicate the level of content mastery attained by the learner.

Self and Peer Assessment

Self and peer assessment actively engages learners by helping them recognise their strengths and weaknesses, as well as steps for improvement, thereby fostering a sense of responsibility for their academic development.

Rubrics and Grading Criteria

In CBE, an assessment rubric is a scoring tool that clearly defines what "success" looks like for a specific task. Unlike traditional marking, where a teacher might give a grade, a rubric breaks the grade down into specific criteria and levels of mastery. It is the "measuring stick" that ensures every learner is judged fairly against the same set of skills.

The CBE Rubric

A typical rubric is a grid consisting of three main parts:

- **Criteria:** The specific knowledge, skills, attitudes and values being tested

- **Descriptors:** Detailed sentences describing exactly what a learner's work looks like at each level.
- **Performance Levels:** 1 = Not sufficient, 2 = Sufficient; 3= Good; 4 = Very Good, 5 = Excellent

Term 1 Rubrics

STRAND 1: DIGITAL SYSTEMS AND OPERATIONS

Sub-strand: Digital Systems and Devices

Competence: Describe the components and functions of a basic computer system.

This rubric assesses the learner's ability to identify hardware and software and understand their interactions.

Dimension	1–Not Sufficient	2–Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Cannot define a computer or distinguish hardware from software.	Defines terms but cannot provide examples of system vs. application software.	Correctly defines and gives examples of hardware, system software, and apps.	Explains the specific functions of basic hardware (e.g., system unit vs. peripherals).	Comprehensive mastery of how hardware and software work together as a system.
Skills	Unable to identify basic hardware components by name.	Identifies hardware but requires help to perform basic computing tasks.	Independently identifies and uses hardware to perform basic tasks.	Efficiently utilises different hardware components for diverse tasks.	Demonstrates advanced proficiency in hardware identification and functional usage.
Attitudes	Reckless with equipment; shows no interest in how parts work.	Follows safety rules only when reminded; limited curiosity.	Shows willingness to explore parts and follows basic equipment handling rules.	Proactively handles equipment carefully to ensure longevity.	Models a sense of responsibility for shared resources and an inquisitive mindset.

Sub-strand: Operating Systems and Networking

Competence: Perform basic operations within an operating system.

This rubric evaluates the learner's navigation skills and understanding of user interfaces (GUI/CLI).

Dimension	1 – Not Sufficient	2 – Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Cannot define an Operating System (OS) or its purpose.	Lists OS functions but cannot define different interface types (GUI, CLI).	Defines GUI and CLI and explains the general purpose of a user interface.	Explains the specific advantages of GUI over other interface types.	Mastery of OS functions and the evolution/logic of diverse user interfaces.
Skills	Unable to navigate the desktop or find the Start menu.	Navigates the GUI with frequent assistance or hesitation.	Independently navigates the GUI to find applications and system settings.	Confidently manages multiple windows and utilizes shortcuts for navigation.	Demonstrates high digital fluency in operating and customizing the OS environment.
Attitudes	Disorganised digital work; avoids exploring the interface.	Follows navigation steps but lacks confidence.	Shows confidence and values order in the digital environment.	Values efficiency; proactively organises the digital workspace.	Exhibits high confidence and a methodical approach to digital navigation.

Sub-strand: Health, Safety and Security

Competence: Apply fundamental health and safety practices when using ICT.

This rubric focuses on ergonomics and physical safety in the computer lab.

Dimension	1 – Not Sufficient	2 – Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Ignorant of health risks (e.g., eye strain, back pain) from computer use.	Identifies one health issue but lacks knowledge of prevention measures.	Discusses health/safety issues and lists basic prevention measures (ergonomics).	Explains the physical and safety rationale behind specific lab rules.	Comprehensive knowledge of health, physical safety, and long-term well-being in ICT.
Skills	Ignores ergonomic rules; sits incorrectly or leaves cables messy.	Attempts to sit correctly but often lapses into poor habits.	Successfully sets up an ergonomic workspace and practices safe habits.	Consistently maintains safe and ergonomic practices throughout all sessions.	Expertly manages workspace for maximum health and physical safety.
Attitudes	Indifferent to personal well-being or lab safety.	Aware of well-being but requires reminders to take proactive steps.	Values personal health and safety when using computers.	Proactive in identifying and avoiding physical hazards in the lab.	Models a deep commitment to health and advocates for safe lab practices.

STRAND 2: DATA HANDLING AND PRODUCTIVITY SOFTWARE TOOLS

Sub-strand: Data Management

Competence: Organise digital files and folders effectively.

This rubric assesses file management and hierarchical structures.

Dimension	1 – Not Sufficient	2 – Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Cannot define a file or a folder.	Defines terms but doesn't understand the "Drive > Folder > File" hierarchy.	Clearly explains the concept of a hierarchical file structure.	Explains the importance of logical naming and structure for data retrieval.	Mastery of systematic data management and organisational logic.
Skills	Unable to create or rename a folder independently.	Performs basic tasks (create/name) but struggles with moving or deleting.	Independently creates, renames, copies, moves, and deletes files/folders.	Methodically organises complex sets of files into logical subfolders.	Demonstrates seamless, efficient management and location of all digital data.
Attitudes	Randomly saves files; shows no care for digital organisation.	Follows file rules only when specifically instructed for a task.	Values a clutter-free digital space and uses systematic approaches.	Shows close attention to detail in maintaining an organised drive.	Proactively maintains a well-organised, methodical digital environment.

Sub-strand: Multimedia Creation

Competence: Use a simple graphic tool to create or edit an image.

This rubric is based on the specific syllabus example for drawing the Eswatini flag and image editing.

Dimension	1 – Not Sufficient	2 – Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Cannot identify basic functions like crop, resize, or rotate.	Identifies functions but struggles to explain their purpose.	Understands how to use tools and the process of adding captions.	Clear understanding of all manipulation tools and text placement.	Comprehensive technical mastery of image manipulation concepts.
Skills	Fails to apply edits; results are distorted or unrecognisable.	Applies edits with low precision; flag is recognisable but lacks detail.	Successfully edits pictures and draws the Eswatini flag with the correct colours.	Edits are precise; the flag has accurate proportions and symbols.	Professional-level precision and artistic detail in all graphic tasks.
Attitudes	No interest in the task or experimentation.	Completes tasks with minimal effort or curiosity.	Artistic; enjoys trying different tools and visual designs.	Enthusiastically experiments and shows strong attention to detail.	Exceptional creativity; values detail and cultural expression in work.

Sub-strand: Digital Text and Publishing

Competence: Produce and format a basic text document.

This rubric evaluates word processing, from interface identification to document creation

Dimension	1 – Not Sufficient	2 – Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Cannot identify the ribbon, tabs, or title bar.	Identifies parts of the interface but cannot explain formatting groups.	Understands how to create/save and identify font/paragraph groups.	Explains the purpose of page setup and layout options.	Comprehensive knowledge of word processor functionality and layout logic.
Skills	Unable to type or save a blank document.	Types text but fails to apply consistent font or paragraph formatting.	Creates, types, and saves a short story using basic formatting (font/paragraph).	Produces a well-formatted letter or story with advanced layout adjustments.	Produces polished, professional-standard documents with perfect formatting.
Attitudes	Indifferent to the appearance or clarity of written work.	Follows basic steps but work is messy or unproofed.	Takes pride in the visual presentation and clarity of their work.	Values effective communication; meticulous in formatting.	Shows exceptional pride and meticulousness in document design.

Sub-strand: Digital Media and Presentations

Competence: Create a simple digital presentation to convey information.

This rubric assesses slide design, animations, and transitions.

Dimension	1 – Not Sufficient	2 – Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Cannot explain what a slide layout or design theme is.	Identifies themes but doesn't understand animations or transitions.	Explains types/purpose of layouts, themes, animations, and transitions.	Explains how different design choices impact audience engagement.	Mastery of multimedia design principles for effective communication.
Skills	Unable to add text or images to a slide.	Creates a presentation, but it lacks themes or logical flow.	Designs a short presentation with text, images, animations, and transitions.	Confidently displays a slide show and uses varied layouts effectively.	Expertly crafts and delivers a polished, engaging multimedia presentation.
Attitudes	No confidence in sharing ideas; presentation is incomplete.	Presents information but lacks enthusiasm or visual flair.	Shows confidence in expressing ideas visually.	Values sharing knowledge and celebrating cultural heritage (e.g., Eswatini traditions).	Demonstrates high confidence and a strong desire to advocate using technology.

Sub-strand: Data Processing and Visualisation

Competence: Use a spreadsheet to enter data and perform simple calculations.

This rubric evaluates spreadsheet navigation and the use of basic formulas

Dimension	1 – Not Sufficient	2 – Sufficient	3 – Good	4 – Very Good	5 – Excellent
Knowledge	Cannot identify a cell, row, or column.	Identifies cells but does not understand how formulas work.	Understands cell references and the purpose of SUM, MIN, MAX, and AVG.	Explains the difference between labels (text) and values (numbers/formulas).	Mastery of spreadsheet logic and data processing concepts.
Skills	Unable to enter data into a specific cell.	Enters data but requires constant help with writing formulas.	Independently enters data and applies SUM, MIN, MAX, and AVERAGE formulas.	Accurately formats cells (currency, decimals) and manages data sets.	Demonstrates expert proficiency in data entry and complex formula application.
Attitudes	Impatient with data entry; avoids calculations.	Completes data entry with little regard for accuracy or neatness.	Shows patience in data entry and values accuracy in calculations.	Exhibits a methodical and precise approach to data handling.	Values data integrity and shows exceptional precision in all tasks.

Lesson 25 - 30 (Final Weeks): Review of both strands, remedial work, and a Summative End-of-Term Practical Assessment covering all Grade 8 competencies for Strands 1 and 2.
